

Harnessing Generative AI: Large Language Models as Catalysts for Innovation in Arbitration

With the ability to understand, interpret and generate persuasive language, generative AI can assist in almost all stages of arbitration, from drafting legal documents, analysing complex contracts and large data sets, researching precedents and preparing submissions. This event will involve a panel of experts delving into the unparalleled potential of large language models and discuss the ethical challenges that arise from the use of generative AI, such as maintaining transparency, avoiding bias, and ensuring human oversight. We will also explore the balance between leveraging AI for increased efficiency and upholding the principles of due process and fairness.

Speakers

Lachlan McCalman (Chief Practitioner, Gradient Institute)

Natasha Blycha (Partner, Stirling & Rose)

Luke Carbon (Senior Associate, Ashurst)
